PROBLEM STATEMENT

- Elders with conditions like high blood pressure find normal phone apps too hard to use
- Handwritten logbooks get lost, messy or forgotten
- Nurses waste time reading unclear records and miss health trends

OBJECTIVES

- Build a super-simple mobile app for elders to record vitals by photo
- Create an alert system for abnormal blood pressure / heart rate
- Provide a web dashboard for faster clinical decisions

WORKING PROTOTYPE

Clinic dashboard — latest vitals, status alerts & BP trend

Patient app

STEEP ANALYSIS

S

SOCIAL

Less tech fear — simple for elders

T

TECHNOLOGICAL

AI reads the photo; data updates automatically

E

ECONOMIC

Keep old monitors — save money

E

ENVIRONMENTAL

Less travel; paperless records

P

POLITICAL

Fits the national Digital Health plan & PDPA

BENEFITS · NABC · COST

- Universal — works with any meter the patient already owns
- Zero typing: AI OCR captures every reading accurately
- Real-time alerts let clinics act on dangerous readings fast

Cost: patients reuse their own phone & meter and the cloud runs on free tiers, so a clinic pilot costs almost nothing (~RM 0).
